

## ABOUT US

With more than forty years supporting Australian industry, Waste Initiatives is a trusted provider of waste processing and recycling systems. We partner with businesses to develop practical, engineered waste solutions that improve recovery, reduce landfill and deliver long term operational performance.

## VERTECH SORTING SYSTEMS FOR C&D AND C&I WASTE

Vertech Sorting Systems provide high performance solutions for construction, demolition, commercial and industrial waste, delivering reliable separation and consistent recovery of valuable recyclables.

Our systems can incorporate:

- Sorting screens and Trommels for primary screening
- Picking Stations for manual or automated sorting
- Fines Recovery Systems for enhanced resource recovery
- Air and Density Separation Units for precise separation
- Magnetic separation for Ferrous metal removal
- Conveyor Systems and Steel Belt Feeders for smooth material flow

These components can be configured into complete sorting lines suitable for trommel based processing, commingled recycling, organics pre sorting for FOGO applications, bulky waste separation and mixed C&D waste recovery.

Each system is backed by Waste Initiatives through consultation, engineered design, installation, commissioning and long term service support to ensure a tailored solution that suits your waste profile and operational requirements.

## STATIC SORTING SOLUTIONS

ENGINEERED SOLUTIONS FOR C&D/C&I WASTE STREAMS

At Waste Initiatives, we deliver engineered recycling solutions for construction, demolition, commercial and industrial waste. Our Vertech sorting systems integrate screening, separation and sorting technology tailored to your waste streams, site layout and processing goals.

Our engineering team uses 3D CAD modelling to design efficient layouts that streamline material flow, minimise downtime and support smooth installation. Each system is planned to deliver reliable and predictable performance.

We consider the complete process from infeed to final outputs, ensuring a controlled workflow for mixed waste inputs. Vertech systems are built for demanding Australian conditions and maintain consistent throughput across a wide range of materials.

With national parts availability and responsive service teams, Waste Initiatives supports every installation to help reduce landfill, improve recovery rates and deliver long term sustainability outcomes.

“We design waste solutions that fit seamlessly into our customers’ operations, making waste management easier, safer and more cost-effective.”

On time, on budget, beyond expectation.

“We take pride in being a trusted partner to waste processors, producers, and contractors across diverse industries, helping them achieve their sustainability and operational goals.”
